P50L

Volume of water: Ensure the cooling water reach the end of the tip.

Functional Description: Explore subgingival calculus, root planing and subgingival scaling.

Applicable area: Teeth adjacent part

Operation method: The tip is perpendicular to the long axis of the tooth, The front or back 2mm tip needle part adapt the tooth surface. Move the tip up and down.

Demo Video

MODE: P
POWER

IRRIGATION

P50R

Volume of water: Ensure the cooling water reach the end of the tip.

Functional Description: Explore subgingival calculus, root planing and subgingival scaling.

Applicable area: Teeth adjacent part

Operation method: The tip is perpendicular to the long axis of the tooth, The front or back 2mm tip needle part adapt the tooth surface. Move the tip up and down.

Demo Video

MODE: P

POWER

IRRIGATION

P52

Volume of water: Ensure the cooling water reach the end of the tip

Functional Description: For gingival scaling

Applicable area: All teeth buccal and lingual site

Operation method: The tip is parallel to the long axis of the tooth, and ensure the 2 mm right or left tip middle site adapt the tooth surface. Move the tip front and back.

Demo Video

MODE: P

P54R

Water volume control: Ensure that the cooling water reaches the end of the tip

Function: For the treatment of root bifurcation area.

Applicable area: Root bifurcation area

MODE: P
POWER

IRRIGATION

P56

Volume of water: Ensure the cooling water reach the end of the tip

Functional Description: Used for gingival large stones and dental plaque

Applicable area: All teeth buccal and lingual site.

Operation method: The tip is parallel to the long axis of the tooth. and ensure the 2 mm right or left tip niddle site adapt the tooth surface. Move the tip front and back.

MODE: P
POWER

IRRIGATION

P58

Water volume control: Ensure that the cooling water reaches the end of the tip.

Function: For the treatment of root bifurcation, removal of supragingival large calculus and plaque.

Applicable area: root bifurcation area, labial (buccal) surface and lingual (palatal) surface of all teeth.

MODE: P
POWER

IRRIGATION

P59

Volume of water: Ensure the cooling water reach the end of the tip

Functional Description: For subgingival calculus probing, subgingival scaling and root planing

Applicable area: All teeth buccal and lingual site

Operation method: The tip is parallel to the long axis of the tooth. and ensure the 2 mm right or left tip middle site adapt the tooth surface. Move the tip front and back.

Demo Video

MODE: P

POWER

IRRIGATION

P80

Function: For subgingival irrigation. It is mainly used to rinse out the residue after the subgingival treatment.

Features: For non-invasive irrigation. The water outlet is at about 1 mm from the tip, which is convenient for subgingival flushing at different areas and angles.

Use: Used in P mode of PT5. Recommended power level: level 1~5 (Please do not exceed the recommended maximum power level. Otherwise instrument fracture is easy to happen).

Note:

- (1) The tip is mainly used for subgingival irrigation, and should not be used for scraping solid objects as much as possible to prevent the tip from being worn too fast and shortening the service life.
- (2) In order to ensure the safety, it is recommended to firstly perform the external debugging, select debugging water volume under power level 1, ensure the water output is normal, and adjust the power within the range of power level limit.

MODE: P
POWER

IRRIGATION

P90

Volume of water: Ensure the cooling water reach the end of the tip

Functional Description: Used for gingival large stones and dental plaque

Applicable area: All teeth buccal and lingual site of dental implant or prosthesis.

Operation method: The tip is parallel to the long axis of the tooth, and ensure the 2 mm right or left tip middle site adapt the tooth surface. Move the tip front and back.

Warn: Please ensure that there is water coming out from the handpiece to avoid damage to the tip

MODE: P
POWER

IRRIGATION

P94

Function: Cleaning and maintenance of implant

Size: Plastic head is of 15mm length

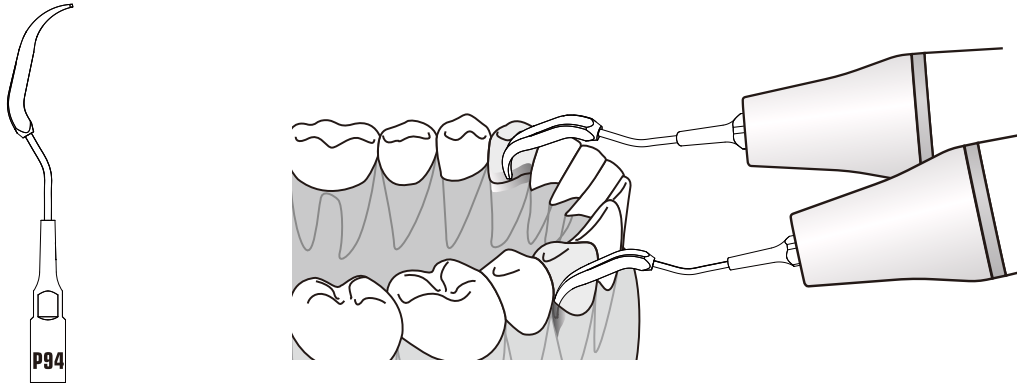

Features: The tip is of a slender hook shape, making it easier for subgingival cleaning and maintenance.

Use:

- a. Used in P mode of Periodontal Treatment Device. Recommended power level: level 1~3.
- b. Used in P mode of U600. Recommended power level: level 1
- c. Used in P mode of U6. Recommended power level: level 1~3.

Note:

- (1) The plastic part is made of PEEK material which can be disinfected under high temperature and high pressure, the higher the power, the easier it is to wear;
- (2) Avoid the tip stuck in the gap of the tooth during operation to avoid breaking the tip.

MODE: P
POWER

IRRIGATION

P95

Function: Cleaning and maintenance of implant

Size: Plastic head is of 19mm length

Features: The tip is of a slender hook shape, making it easier for subgingival cleaning and maintenance.

Use:

a. Used in P mode of Periodontal Treatment Device. Recommended power level: level 1~6.

b. Used in P mode of U600. Recommended power level: level 1~3

c. Used in P mode of U6. Recommended power level: level 1~6.

Note:

(1) The plastic part is made of PEEK material which can be disinfected under high temperature and high pressure, the higher the power, the easier it is to wear;

(2) Avoid the tip stuck in the gap of the tooth during operation to avoid breaking the tip.

MODE: P

P4 (PD4/PS4)

Recommended for cleaning and irrigating of periodontal shallow pockets.

Demo Video

MODE: P
POWER

IRRIGATION

P5 (PD5)

For removal of the tartar in the adjacent of teeth and Gingival margin of the neck.

MODE: P
POWER

IRRIGATION

P6 (PD6)

Slim and sharp, recommended for cleaning and irrigating of periodontal deep pockets.

MODE: P
POWER

P7 (PD7)

Slim and sharp ,recommended for cleaning and irrigating of subgingival deposits.

MODE: P
POWER

IRRIGATION

P8 (PD8)

Function: used to remove the calculus at shallow periodontal pocket and treat the adjacent tooth surface and ditch area.

Features: The tip is flat and wide, which can be used to clean the teeth surface at subgingival 1/4 and the supragingival part.

MODE: P
POWER

IRRIGATION

P10 (PD10)

For gentle scaling and removal of tartar in the periodontal pocket.

MODE: P
POWER

IRRIGATION

P11 (PD11)

For high efficient removal of the stubborn tartar in the subgingival.

MODE: P
POWER

IRRIGATION

P12 (PD12)

With slim blade edge at the end of the tip, for high efficient removal of the stubborn tartar in posterior subgingival.

MODE: P
POWER

IRRIGATION

P14L(PD14L)

Left curved, with slim blade edge at the end of the tip, for high efficient removal of the stubborn tartar in posterior subgingival.

MODE: P
POWER

IRRIGATION

P14R(PD14R)

Right curved, with slim blade edge at the end of the tip, for high efficient removal of the stubborn tartar in posterior subgingival.

MODE: P
POWER

IRRIGATION

P18 (PD18)

For probing the deep periodontal pocket tartar, and subgingival rinse after scaling.

MODE: P
POWER

IRRIGATION

P20 (PD20)

For removal of the tartar in the adjacent of teeth, gingival margin of the neck and the tartar within 3mm in the subgingival pocket.

**MODE: P
POWER**

IRRIGATION

P20L (PD20L)

Left curved, for high efficient removal of the stubborn tartar in posterior subgingival.

MODE: P
POWER

IRRIGATION

P20R (PD20R)

Right curved, for high efficient removal of the stubborn tartar in posterior subgingival.

MODE: P
POWER

IRRIGATION

P21L(PD21L)

Left curved, for the scaling of root bifurcation and root surface of adjacent of posterior teeth sector.

MODE: P
POWER

IRRIGATION

P21R(PD21R)

Right curved, for the scaling of root bifurcation and root surface of adjacent of posterior teeth sector.

MODE: P
POWER

IRRIGATION

P22L (PD22L)

Left curved, the 12mm straight part can assure the complete removal of subgingival tartar and stains.

MODE: P
POWER

IRRIGATION

P22R (PD22R)

Right curved, the 12mm straight part can assure the complete removal of subgingival tartar and stains.

MODE: P
POWER

IRRIGATION

P33

Function: Used to remove calculus deep in the periodontal pocket and rinse the periodontal pocket.

Features: The tip is slender and can be used for fine scaling of subgingival root surface.

Use: Used in P mode of PT5. Recommended power level: level 1~8

Note:

(1) The tip is mainly used for treatment in deep periodontal pockets. During use, the power should be set as small as possible and cannot exceed the recommended power level.

(2) The tip has an irrigating function on the periodontal pocket. During operation, the water volume should be set as large as possible.

MODE: P
POWER

PD40

Function: It can be used as an adapter to hold the implant maintenance tips PD41 and PD42 to clean and maintain the implant.

MODE: P
POWER

IRRIGATION

PD41

Function: For implant maintenance. It can be installed to PD40 adapter to realize the cleaning and maintenance of implant.

Size: Plastic head is of 15mm length

Features: The tip is of a slender hook shape, making it easier for subgingival cleaning and maintenance.

Use:

a. Used in P mode of D600. Recommended power level: level 1~3. b. Used in P mode of S6. Recommended power level: level 1~6

Note:

(1) The plastic part is made of PEEK material which can be disinfected under high temperature and high pressure, the higher the power, the easier it is to wear;

(2) Avoid the tip stuck in the gap of the tooth during operation to avoid breaking the tip.

MODE: P
POWER

IRRIGATION

PD42

Function: For implant maintenance. It can be installed to PD40 adapter to realize the cleaning and maintenance of implant.

Size: Plastic head is of 19mm length

Features: The tip is of a slender hook shape, making it easier for subgingival cleaning and maintenance.

Use:

a. Used in P mode of d600. Recommended power level: level 1~5. b. Used in P mode of S6. Recommended power level: level 1~9.

Note:

(1) The plastic part is made of PEEK material which can be disinfected under high temperature and high pressure, the higher the power, the easier it is to wear;

(2) Avoid the tip stuck in the gap of the tooth during operation to avoid breaking the tip.

MODE: P
POWER

IRRIGATION

E1(ED1/ES1)

120° holder, used to hold the file diameter $\Phi 0.7\text{mm}$ or $\Phi 0.8\text{mm}$.

Recommended for the cleaning and irrigating of the root canal, usually used for the anterior teeth.

Demo Video

Use only the provided flat wrench to tighten the file holders on the handpiece, as well as for gently tightening the files or instruments in the holder. Do not over tighten.

Do not tighten the holder nut when no file or instrument is installed as this may damage it.

Do not mix-install the holder with $\Phi 0.7\text{mm}$ and $\Phi 0.8\text{mm}$ file, the $\Phi 0.8\text{mm}$ file will not be able to be installed after a $\Phi 0.7\text{mm}$ file installed on the holder. Each Endo file is recommended to be used not more than 10 times.

MODE: E

POWER

IRRIGATION

E2(ED2/ES2)

95° holder, used to hold the file diameter $\Phi 0.7\text{mm}$ or $\Phi 0.8\text{mm}$.

Recommended for cleaning and irrigation of the root canal, usually used for the molar teeth.

Demo Video

Use only the provided flat wrench to tighten the file holders on the handpiece, as well as for gently tightening the files or instruments in the holder. Do not over tighten.

Do not tighten the holder nut when no file or instrument is installed as this may damage it.

Do not mix-install the holder with $\Phi 0.7\text{mm}$ and $\Phi 0.8\text{mm}$ file, the $\Phi 0.8\text{mm}$ file will not be able to be installed after a $\Phi 0.7\text{mm}$ file installed on the holder. Each Endo file is recommended to be used not more than 10 times.

MODE: E
POWER

IRRIGATION

E3 (ED3/ES3)

Recommended for melting gutta-percha.

Immerse the instrument in eugenol before inserting it in the canal.

Slightly press the instrument against the cone of gutta-percha and activate the scaler to condense until the canal is filled.

E3

Demo Video

MODE: E

POWER

E3D(ED3D/ES3D)

Diamond-coated(40µm) instrument for enlarging the root canal and access to files broken in the root canal.

Don't touch the broken file when enlarging the root canal in case putting it deeper in the canal.

Demo Video

MODE: E
POWER

IRRIGATION

E4(ED4/ES4)

Used to remove the root filling obstructions during the root canal retreatment. The length of tip slender part is (22mm).

Demo Video

POWER

IRRIGATION

ED17

Function: Used for root canal detection, pulp chamber cleaning, and orifice opening.

Features: The tip has 15 micro-washers, and it is of good cutting performance.

Back and forth motion of tip brings more efficient operation.

In the case of waterless operation, select the mode of "Work for 5~10 seconds and then stop for 2 seconds", and open water every 60 seconds for cooling and rinsing.

Note:

(1) Due to the strong cutting performance of the tip, in order to prevent the penetration of the medullary cavity, it is recommended to use with a root canal microscope.

MODE: E
POWER

IRRIGATION

ED18

Function: Used to determine the position of the root canal, remove the dentin, calcification and loose crown at the 1/3 crown of the root canal.

Features: The tip has 12 micro-washers, and it is of good cutting performance.

Back and forth motion of tip brings more efficient operation.

In the case of waterless operation, select the mode of “Work for 5~10 seconds and then stop for 2 seconds”, and open water every 60 seconds for cooling and rinsing.

Note:

(1) Due to the strong cutting performance of the tip, in order to prevent the penetration of the medullary cavity, it is recommended to use with a root canal microscope.

E60(ED60)

Features: Minimally invasive irrigation; the working part is spiral but not sharp, with basically no cutting ability, effectively avoiding the root canal shape from being destroyed, bringing efficient and safe operation.

Irrigating operation: Put the irrigating tip into the root canal, try to keep the tip unstressed, start the device for 20 seconds and then stop to clean the root canal. Generally, a root canal needs to be irrigated 3×20 seconds.

Recommended service life: 30 ~ 50 root canals

Note: (1) In order to ensure the service life of the tip, it is recommended to use it according to the recommended method: first perform the external debugging, start the foot pedal under power level 1, ensure the water output is normal, and adjust the power within the power level limit (level 1~6) according to individual need to ensure that the water output can reach the tip end (the water can reach the tip end through adjusting water volume). After all the above steps, start root canal irrigation.

(2) During irrigation, in order to avoid instrument fracture, please prevent tip from getting stuck and vibrating in root canal.

POWER

IRRIGATION

E62(ED62)

Function: Used for irrigation of root canal after root canal preparation.

Dimensions: $\varnothing 0.3\text{mm}$; taper 0%. Working part length: 16mm

Features: Minimally invasive irrigation; the surface of working part is smooth, with cutting ability, effectively avoiding the root canal shape from being destroyed, bringing safer operation.

Irrigating operation: Put the irrigating tip into the root canal, try to keep the needle unstressed, start the device for 20 seconds and then stop to clean the root canal. Generally, a root canal needs to be irrigated 3×20 seconds.

Recommended service life: 30 ~ 50 root canals

Note: (1) In order to ensure the service life of the tip, it is recommended to use it according to the recommended method: first perform the external debugging, start the foot pedal under power level 1, ensure the water output is normal, and adjust the power within the power level limit (level 1~3) according to individual need to ensure that the water output can reach the tip end (the water can reach the tip end through adjusting water volume). After all the above steps, start root canal irrigation.

(2) During irrigation, in order to avoid instrument fracture, please prevent tip from getting stuck and vibrating in root canal.

MODE: E
POWER

IRRIGATION

E66(ED66)

Function: Used for irrigation of root canal after root canal preparation, so as to rinse out the debris.

Dimensions: Diameter of file tip: \varnothing 0.15mm; taper 2%; length of thread working part: 16mm

Features: The working part has a sharp K-shaped spiral shape, which has strong cutting ability. It can effectively clean out the debris in root canal by using it under low power. Recommended service life: 30~50 root canals

Note: (1) In order to ensure the service life of the tip, it is recommended to use it according to the recommended method: first perform the external debugging, start the foot pedal under power level 1, ensure the water output is normal, and adjust the power (level 1~3) according to individual need to ensure that the water output can reach the tip end (the water can reach the tip end through adjusting water volume). After all the above steps, start root canal irrigation. (2) During irrigation, in order to avoid instrument fracture, please prevent tip from getting stuck and vibrating in root canal. (3) The top edge of ED66 tip is sharp. Please pay special attention to the operation at high power during the irrigation. Otherwise it will cause non-therapeutic damage to the root canal wall.
